## AMENDED CLAIMS

[received by the International Bureau on 15 March 2005 (30.03.05); the original claim 2 has been amended]

- the preparation of a particle 5 1. A process for composed of a coprecipitate applied as a layer around a neutral hydrophilic carrier by spraying an organic solution over said neutral hydrophilic carrier, said solution comprising at least active substance, one surface-active agent and one 10 hydrophilic polymer, characterized in that spraying of the whole of the solution is carried out in at least two separate stages, each of these stages being followed systematically by a stage of 15 milling the product obtained on conclusion of the preceding stage.
- 2. The process for the preparation of the particles as claimed in claim 1, characterized in that it comprises the following stages:
  - a) preparing an organic solution comprising the active substance, the hydrophilic polymer and the surface-active agent,
  - b) spraying a portion of the solution obtained ina) over the neutral hydrophilic carriers,
  - c) milling the particles obtained in stage b),
  - d) spraying the remaining amount of the organic solution over the particles milled in stage c), and
- e) final milling of the particles obtained in stage d).
- 3. The process for the preparation of the particles as claimed in either one of claims 1 and 2, characterized in that the spraying/milling sequence (stages b to d) is repeated one or more times.

AMENDED SHEET (ARTICLE 19)

4. The process for the preparation of the particles as claimed in any one of claims 1 to 3, characterized in that it additionally comprises a drying stage either after each spraying stage, before milling, or immediately after the milling.
